

Pleural Empyema in Children

We are developing a study on **pleural empyema** (a serious lung infection), to find out the best way to treat children affected by this condition.

We would like to speak with **parents and carers of children treated in hospital for pleural empyema, as well as with children and young people themselves if they wish**, to understand which parts of their hospital care mattered most.

Your experiences and opinions will **help us design research that truly reflects what is important to families**. No previous experience is needed, and guidance will be provided as required.

You would be invited to take part in a **1.5-hour online discussion** (e.g., via Zoom or Teams) **OR a telephone discussion** with a researcher.

You will be reimbursed for your time at £27.50 per hour, plus an additional £5 remote working cost, in line with national guidance.
