PARTICIPANTS WITH EXPERIENCE OF TAKING CAPECITABINE NEEDED FOR CO-DESIGN WORKSHOPS

What is it about: We would like to design a solution to help make it easier for patients to take capecitabine treatment as prescribed through a co-design workshop. The workshops will be online or in person.

Why is it important: Capecitabine is an anticancer drug given as a tablet, used for a variety of cancers. Having anticancer treatment in tablet form allow patients to have treatment at home, is less invasive and reduces the number of hospital trips needed during treatment, compared to receiving treatment through a vein. However, this can mean a lot of responsibility on patients, and studies show that many patients do not take capecitabine as prescribed.

Who can help: You are, or have been, on capecitabine (but not with radiotherapy at the same time) for colorectal cancer. We are particularly interested in those participants who have struggled with taking capecitabine as prescribed.

What is the output: We hope to come up with a solution of how we can improve patients' ability to take capecitabine according to clinical recommendations that can work in a clinical setting. Workshops will last around 150 minutes and will either be online or in person. To thank you for your time, all participants will receive £68.75 after the workshop, and if participating in an in-person workshop we will also be reimbursed for travel costs up to £15.

If you wish to participate in this study, or would like any further information, please contact me on: h.kim@imperial.ac.uk or scan the following QR code:
